

Control Flow

Chris Piech and Mehran Sahami
CS106A, Stanford University

Recall, Karel's World

- Grid, where “corner” is intersection of each street/avenue
- Karel is currently on corner (1, 1)
- If Karel moved forward, Karel would be on corner (2, 1)
- Karel’s beeper bag can have 0, 1, or more (up to infinite) beepers

First Lesson in Programming Style

```
from karel.stanfordkarel import *
```

```
"""
```

```
File: StepUpKarel.py
```

```
-----
```

```
Karel program, where Karel picks up a beeper,  
jumps up on a step and drops the beeper off.
```

```
"""
```

Multi-line
comment

```
def main():  
    move()  
    pick_beeper()  
    move()  
    turn_left()  
    move()  
    turn_right()  
    move()  
    put_beeper()  
    move()
```

SOFTWARE ENGINEERING PRINCIPLE:
Aim to make programs readable by *humans*

```
# Karel turns to the right
```

```
def turn_right():  
    turn_left()  
    turn_left()  
    turn_left()
```

names
(snake_case)

Today's Goal

1. Code using loops and conditions
2. Trace programs that use loops and conditions

Today's Route

for loop

```
for i in range(count):  
    statements           # note indenting
```

```
def turn_right():  
    for i in range(3):  
        turn_left()      # note indenting
```

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

First time
through the
loop

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

First time
through the
loop

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

First time
through the
loop

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

First time
through the
loop

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

Second time
through the
loop

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

Second time
through the
loop

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

Second time
through the
loop

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

Second time
through the
loop

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

Third time
through the
loop

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

Third time
through the
loop

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

Third time
through the
loop

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

Third time through the loop

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

Fourth time
through the
loop

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

Fourth time
through the
loop

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

Fourth time
through the
loop

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

Fourth time
through the
loop

Place Beeper Square

```
def main():  
    for i in range(4):  
        put_beeper()  
        move()  
        turn_left()
```

You need the **postcondition** of a loop to match the **precondition**

Done!

Today's Route

while loop

```
while condition:
```

```
    statements
```

```
    # note indenting
```

```
def move_to_wall():
```

```
    while front_is_clear():
```

```
        move()
```

```
        # note indenting
```

Conditions Karel Can Check For

<i>Test</i>	<i>Opposite</i>	<i>What it checks</i>
<code>front_is_clear()</code>	<code>front_is_blocked()</code>	Is there a wall in front of Karel?
<code>left_is_clear()</code>	<code>left_is_blocked()</code>	Is there a wall to Karel's left?
<code>right_is_clear()</code>	<code>right_is_blocked()</code>	Is there a wall to Karel's right?
<code>beepers_present()</code>	<code>no_beepers_present()</code>	Are there beepers on this corner?
<code>beepers_in_bag()</code>	<code>no_beepers_in_bag()</code>	Any there beepers in Karel's bag?
<code>facing_north()</code>	<code>not_facing_north()</code>	Is Karel facing north?
<code>facing_east()</code>	<code>not_facing_east()</code>	Is Karel facing east?
<code>facing_south()</code>	<code>not_facing_south()</code>	Is Karel facing south?
<code>facing_west()</code>	<code>not_facing_west()</code>	Is Karel facing west?

This is in Chapter 10 of the Karel course reader

Task: Place Beeper Line

Before

After

Place Beeper Line

```
def main():  
    while front_is_clear():  
        put_beeper()  
        move()
```

Place Beeper Line

```
def main():  
    while front_is_clear():  
        put_beeper()  
        move()
```

Place Beeper Line

```
def main():  
    while front_is_clear():  
        put_beeper()  
        move()
```

Place Beeper Line

```
def main():  
    while front_is_clear():  
        put_beeper()  
        move()
```

Place Beeper Line

```
def main():  
    while front_is_clear():  
        put_beeper()  
        move()
```

Place Beeper Line

```
def main():  
    while front_is_clear():  
        put_beeper()  
        move()
```

Place Beeper Line

```
def main():  
    while front_is_clear():  
        put_beeper()  
        move()
```

Place Beeper Line

```
def main():  
    while front_is_clear():  
        put_beeper()  
        move()
```

Place Beeper Line

```
def main():  
    while front_is_clear():  
        put_beeper()  
        move()
```

Place Beeper Line

```
def main():  
    while front_is_clear():  
        put_beeper()  
        move()
```

Place Beeper Line

```
def main():  
    while front_is_clear():  
        put_beeper()  
        move()
```

Place Beeper Line

```
def main():  
    while front_is_clear():  
        put_beeper()  
        move()
```

Place Beeper Line

```
def main():  
    while front_is_clear():  
        put_beeper()  
        move()
```

BUGGY!

Done!

Place Beeper Line

```
def main():  
    while front_is_clear():  
        put_beeper()  
        move()  
    put_beeper()           # add final put_beeper
```

Not in **while** loop

Fixed!

Place Beeper Line

```
def main():  
    while front_is_clear():  
        put_beeper()  
        move()  
    put_beeper() # add final put_beeper
```

Fixed!

Fence Post Problem

Also sometimes called an “Off By One Error”

A program executes one line at a time.

The **while** loop checks its condition only at the start of the code block and before repeating.

Which Loop

Repeat
Process

Know how
many times
(definite loop)

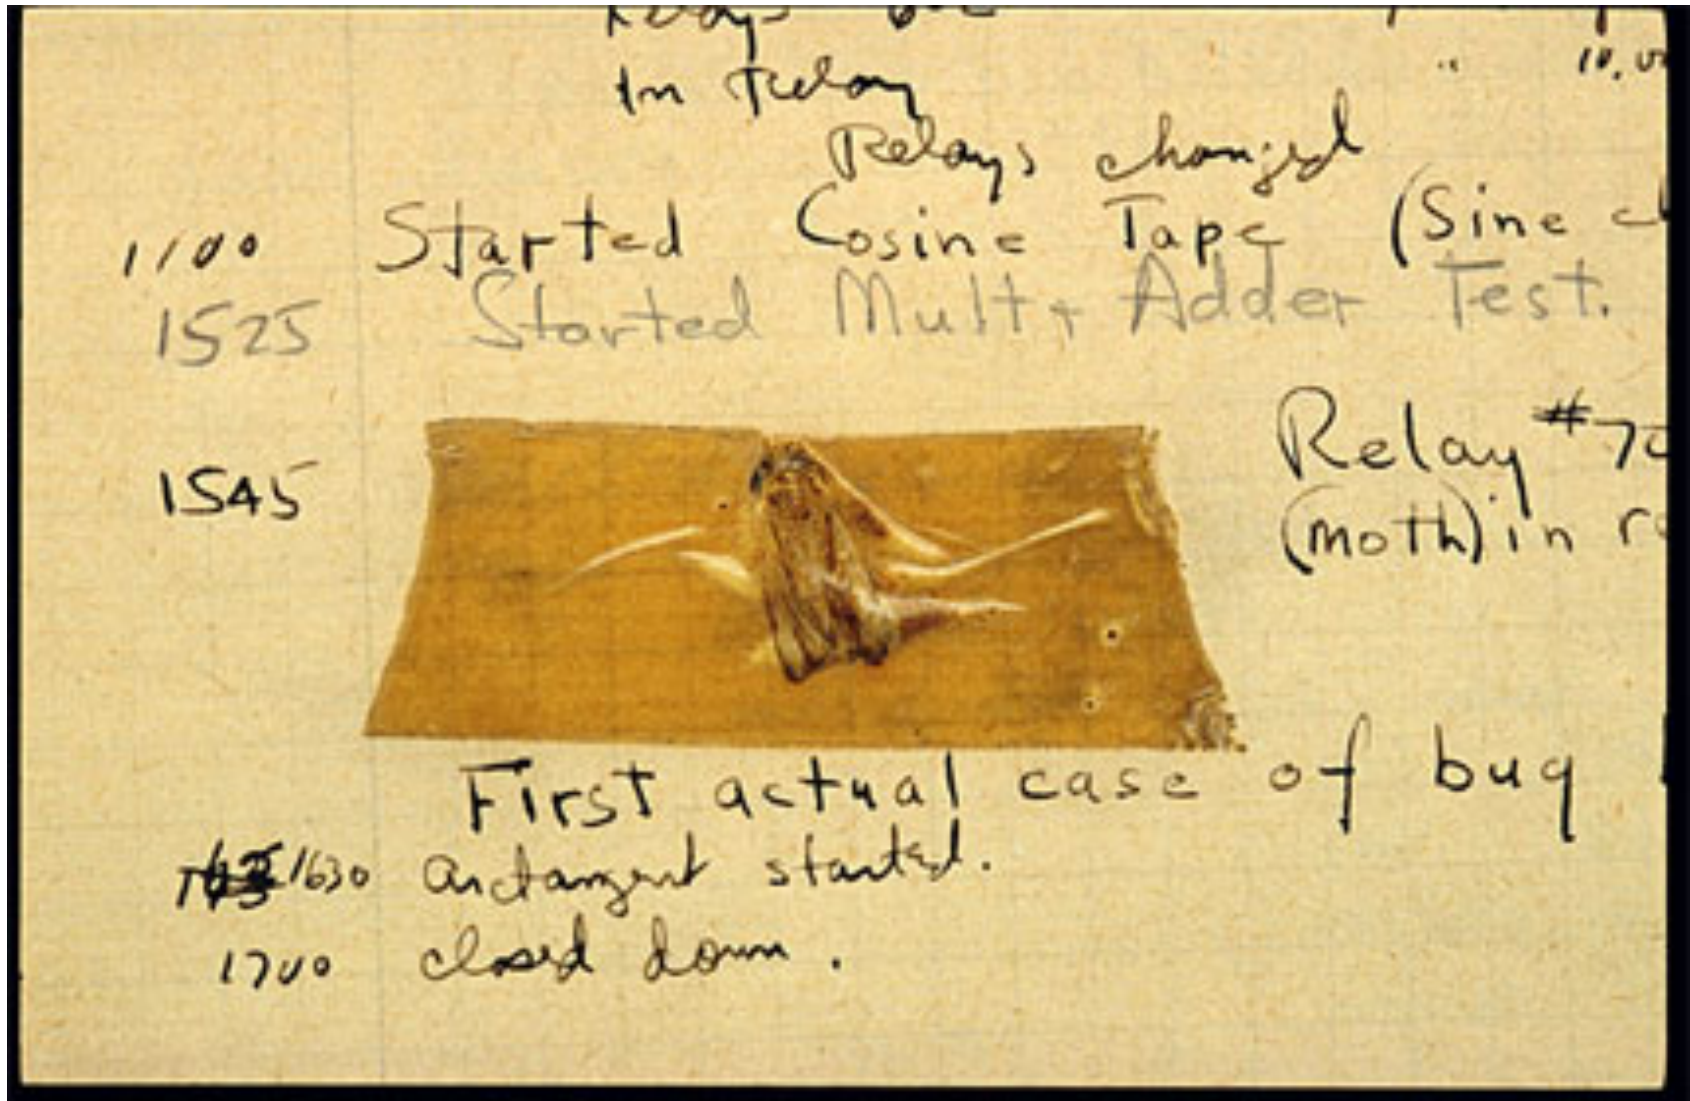

Don't know how
many times
(indefinite loop)

for Loop

while Loop

Actual Bug from Marc II

Grace Hopper

Today's Route

if statement

```
if condition:
```

```
    statements
```

```
    # note indenting
```

```
def safe_pick_up():
```

```
    if beepers_present():
```

```
        pick_beeper() # note indenting
```

Today's Route

if-else statement

`if condition:`

`statements # note indenting`

`else:`

`statements # note indenting`

```
def invert_beeper():
```

```
    if beepers_present():
```

```
        pick_beeper() # note indenting
```

```
    else:
```

```
        put_beeper() # note indenting
```

You just learned most of
programming "control flow"

Today's Goal

1. Code using loops and conditions
2. Trace programs that use loops and conditions

Putting it all together
